Gaia science

- Catalogue content
  - Astrometry
    - Reference frame: ICRF, quasars (27)
    - Iterative solution: formulation (46)
    - Iterative solution: implementation (47)
    - Parallax zero point (217)
    - Telescope calibration/pointing (213); (214)
    - Rotational parallaxes (225)
  - Photometry
    - Overview and implementation (68)
    - Synthetic photometry (187)
  - RVs and RVS
    - Importance of RV (8)
    - Wavelength interval (85)
    - RVS instrument/acquisition (86)
    - DR3 content (87)
    - Derivation from BP/RP in DR3 (169)
    - Metallicities and gravities (189)
    - Extinction (191), (236)
    - Chromospheric activity (200)
  - Variable stars
    - Identification of variability, DR2 numbers (61)
    - Variability across HR diagram (62)
    - Science alerts: transients, SN, lensing, TDEs (36), (202), (203), (204), (205), (206), (240)
    - LPVs: radial velocity time series (158)
    - Citizen science (132)
    - Variability types
      - Cepheids (43); update (228)
      - RR Lyrae (45); update (229)
      - Ellipsoidal variables (133)
      - Non-radial pulsators: SPB and Gamma Dor (148)
      - Mira variables (185)
      - Delta Scuti variables (232)
      - Beta Cephei variables (237)
  - Data releases
    - DR1, DR2, EDR3 (10)
    - DR3 (76)
    - Classification/parameterisation (89)
    - Catalogue validation (63)
    - Videos & visualisations (54), (147)
- Solar system
  - Sun related
    - Solar siblings (17)
    - Solar analogues (120)
    - Light deflection (104)
    - Stellar flybys (35)
    - Solar activity (28)
  - Minor bodies
    - Objects in DR2 (64)
    - Improved orbits from DR3+ (159)
    - Asteroid masses (241)
    - Tumbling asteroids (247)
    - Interstellar objects (25), (242), (243)
    - Reflectance spectra, classification (180)
    - Yarkovksy effect and NEAs (181)
    - YORP effect and spin states (182)
    - Interplanetary navigation (52)
  - Earth related
    - Asteroids: impact risk (48)
    - Occultations (24)
    - Occultations: stellar diameters (137)
    - Maunder minimum (23)
    - Earth rotation, polar motion (26)
    - Is the Earth flat? (96)
- Exoplanets
  - Astrometric discoveries (19), (78), Gaia 4b/5b (233)
  - Mandalas (12)
  - Gaia's third exoplanet, from microlensing (203)
  - Host stars (248)
  - Radii (21), (216)
  - Hot Jupiters (65)
  - Pinpointing for imaging (88)
  - Habitability (66)
  - Planet engulfment - and the Sun (254)
  - SETI
    - Fermi paradox (100)
    - Life on other worlds (97)
    - Boyajian-types (98), other (55)
    - Dyson spheres (99)
    - Game theory searches (210)
- Stars
  - Star types
    - AM CVn (204)
    - FGKM stars (90)
    - OBA stars (90)
    - M dwarfs (42), (152)
    - AGB stars (90), (91), (121)
    - Wolf–Rayet stars (105)
    - Carbon stars (90), (167)
    - Red supergiants (218)
    - S stars (168)
    - Brown dwarfs (119), ultra-cool dwarfs (90)
  - Groupings
    - Binaries
      - Non-single stars: statistics (79)
      - Cataclysmic variables (140)
      - Ellipsoidal variables (133)
      - Heartbeat stars (226)
      - Resolved binaries within 1 kpc(134)
      - Twin binaries and star formation (138)
      - Triple systems, Lidov–Kozai resonances (135)
      - Quadruple system: orbits and mergers (139)
      - Spectroscopic binaries, circularisation (145)
      - Masses from SB2 binaries (179)
      - Proper motion anomalies (174)
      - Wide binaries: eccentricities (37), MOND (14), formation (193)
    - Young systems
      - OB associations (18); update (223)
      - Strings, snakes, pearls (224)
      - Molecular clouds (192)
    - Open clusters
      - In EDR3 (74); in DR3 (144); update (219)
      - Stellar rotation (103)
      - Moving group and traceback ages (186)
      - Ages (220); kinematics (221); chemistry (222)
      - Binary clusters (251)
      - Hyades
        - Main sequence (151), Black holes (175)
        - Distance, structure, white dwarfs, brown dwarfs (20)
      - Individual
        - Pleiades: (13), Greater Pleiades Complex (249)
        - Coma Ber (33)
        - Westerlund 1 (106)
        - Ophion (238)
  - Late stages
    - Supernovae (59)
    - Supernova remnants (81)
    - Planetary nebulae (37), (124)
    - Neutron stars and pulsars (80)
    - Black holes
      - Cyg X-1 (101)
      - Astrometric binaries, BH1 (101)
      - Microlensing detections (101)
      - Companions to ellipsoidals (133)
      - Influence on cluster dynamics (175)
      - Influence on globular clusters (177)
      - Influence on stellar streams (176)
      - Tiny black holes and sub-subgiants (164)
      - Update 2025 (215)
      - Sgr A*
        - Sun's height above disk (126)
        - Distance to Galactic centre (111)
    - White dwarfs
      - Numbers and space density in DR2 (29)
      - Bifurcation in HR diagram (29), (108), (178)
      - Core composition (107)
      - Mass–radius (107), low mass (29), ultramassive (108)
      - Cooling and crystallisation (42), (108), (139)
      - Binary systems (42), (134)
      - Asteroseismology, double degenerate binaries (108)
      - Atmospheric pollution (73)
      - Double white dwarf mergers (131)
      - White dwarf pulsars: AR Sco and J1912–4410 (141)
- Stellar physics
  - Young stellar objects (201)
  - HR diagram, DR2 results (42)
  - Stellar evolution models (121)
  - Jao gap in M dwarfs (152)
  - Stellar rotation 3 million stars (103)
  - Convection, overshooting (150), (152)
  - Initial mass function (130)
  - Star formation episodes (246)
  - Masses from SB2 binaries (179)
  - Asteroseismology (51), (108), (149)
  - Tip of the red giant branch (188)
  - r- and s-process elements (91)
  - Actinide boost stars (239)
  - Ultra-metal-poor stars (244)
  - The oldest stars (253)
- Extragalactic
  - Cosmology
    - Distance scale (122)
    - Core-cusp problem (128)
    - Plane-of-satellites problem (118)
    - Cepheid distances, H0 (44)
    - Ages: stars older than 13.8 Gyr (69)
    - Quasars and lensing (16), (58), (161)
    - Quasars: cosmological constraints (162)
    - Dual active galactic nuclei (163)
    - Galaxy survey (82)
    - Simulations (194)
    - Black holes and TDEs (206)
  - Dark matter
    - Antlia II (128)
    - Disk–halo dynamics (95)
    - Local mass density (75)
    - Palomar 5 tidal tails (109)
    - Solar activity (28)
  - Local Group galaxies
    - Local group mass (94)
    - Dwarf spheroidals (31); update (231)
    - Ultra-faint dwarfs (234)
    - Andromeda (M31) photometry (83)
    - Antlia II (128)
    - Magellanic Clouds
      - Bulk motions (38)
      - Distance scale (122)
      - Hubble flow (93)
      - LMC (95)
      - SMC (171)
  - Milky Way galaxy
    - Bulk properties
      - Besançon model (125)
      - Mass (93)
      - Escape speed (77)
      - Local mass density (75)
      - Maps of the Milky Way (143)
      - Age, merger/infall history (41), (91), (102)
    - Structure and dynamics
      - Halo
        - Dynamical effects
          - Tumbling disk (95)
          - Effects on bar (112)
        - Halo streams
          - Effect of sub-halos (184)
          - Discovery methods (199, pending)
          - Compilations: EDR3 (71), (156)
          - GSE/Enceladus (15), (197)
          - Sagittarius (198)
          - Cetus–Palta (199)
          - Effect of black holes (176)
          - Virgo VSS/VOD (95), (156)
          - Defining solar motion (153)
        - Globular clusters
          - Motions and orbits (30)
          - Omega Cen (40), (157)
          - Palomar 5: tidal tails (109)
          - M4 and IMBH (177)
          - Oosterhoff dichotomy (230)
          - Multiple populations (235)
      - Disk
        - Rotation
          - Rotation curve from DR2 (49), (113)
          - Oort constants (153)
          - Rotation curve from DR3 (196)
        - Spiral arms
          - Morphology (114)
          - Breathing motion (173)
        - Bar
          - Distance to Galactic centre (111)
          - Origin and resonances (112)
          - Imaging (195)
        - Thin/thick disks (125)
        - Anti-centre (39)
        - Perturbations
          - Antlia II (128)
          - Disk warp (72)
          - Phase-space spiral (114), (117)
          - Radcliffe Wave/Gould's Belt (127)
          - Large Magellanic Cloud (95)
          - More phase-space features (190)
          - The Great Wave (252)
        - Resonances
          - Arcturus and HR 1614 (116)
          - Hercules stream, Eggen's groups (115)
  - Perturbations
    - Physical phenomena
      - Aberration and Galactic rotation (32)
      - Proper motion anomalies/binaries (174)
      - Modified gravity/wide binaries, MOND (14)
      - Axions (110), (142)
      - Relativistic light deflection (104)
      - Gravitational redshift (113)
      - Microlensing
        - Astrometric (11)
        - Photometric (84)
      - Perspective acceleration (34)
      - Variation of G (87)
      - Gravitational waves (136)
      - Fundamental constants (110)
      - Benford's law (146)
    - Runaway stars (165)
    - Runaway stars in R136 (212)
    - Hypervelocity stars (22), (166), (245)
  - Solar neighbourhood
    - Nearby stars
      - CNS5 to 25 pc (129)
      - GCNS to 100pc (33)
      - Mass density (75)
    - Interstellar medium
      - Local Bubble morphology (70)
      - Diffuse interstellar bands (92), (160)
    - Sun's location/motion
      - Solar motion (153)
      - Distance to Galactic centre, dynamical/Sgr A* (111)
      - Sun's height above disk (126)
      - Distance to Galactic centre (111)
